Albert Einstein

Einstein was very curious.
He always asked, “Why?”
People said that he was different,
But that didn’t stop the way he tried.

He was smart and creative.
He liked to watch his toy boat sail.
He loved to study physics.
Some people asked, “Did he ever fail?”

He helped us comprehend more
And taught people about the world,
He made us understand how gravity works,
And enlightened our knowledge of the universe.

He taught that it’s OK to be unique;
Stay determined to follow your dreams.
He helped us learn what curiosity means:
Ordinary people can do extraordinary things.
