Albert Einstein

Albert Einstein had a massive mind
He changed the way people think
He knew how light and gravity act
The father of modern physics is Albert Einstein.

He explained how the world works:
Why gravity is curved,
How light behaves,
Why time is describable.

Einstein taught us that curiosity wins
He stood up for people who were not treated well
His ideas help us realize new things even now
He always harnessed his imagination

He answered big mysteries
Because he always asked why
He taught us to dream big
And never stop being curious.
