Benjamin Franklin

Ben Franklin, curious and creative,
He was our founding father.

Ben Franklin designed innovative inventions:
Bifocals to help see near and far,
The lightning rod to prevent fires,
The Franklin stove to heat rooms safely.

He helped start the first fire department,
Keeping people protected from the treacherous blaze.
Ben established the first public library,
So everyone could expand their mind by reading.

Though he thought of himself as an ordinary person,
He improved the world with his ingenuity.
Ben inspired people to create and invent.
Always remember his curiosity and determination.
